KEEP COOL & SAVE MONEY

Commercial HVAC Incentive Program

ENERGYWISESM
Use less. Spend less. Do more.

HVAC systems can account for half of a building's energy usage

HVAC systems are the primary energy consumers in commercial buildings. Improving the performance of your HVAC system not only saves energy, but can have a positive impact on your building occupants' health, comfort, and productivity as well.

Have an old air-conditioner, rooftop unit, or heat pump that should be replaced? Or are you building a brand new facility and considering a state of the art HVAC system that will provide energy savings for years to come? Either way, our Commercial HVAC Incentive Program will pay you for doing so!

The process is easy – just follow these simple steps

1. Visit with your electrical utility to discuss your project and pick up an application form. An application form is also available on-line, which makes calculating incentives easy.
2. Select a contractor and install HVAC equipment that meets the criteria identified in the table to the right.
3. Complete an application form after the installation is complete and the terms and conditions are satisfied.
4. Submit the signed application (along with proof of purchase identified in the terms and conditions) to your local utility for the incentive within three months of the installation.

ELIGIBLE EQUIPMENT

Equipment Type ^{1,2} (Split or Package)	Size (tons)	Minimum Cooling Efficiency ^{3a,b}	Minimum Heating Efficiency ^{3a,b}	Program Incentive
Air Conditioner or VRF A/C (air cooled)	< 5.4	15.0 SEER	n/a	\$50
Air Conditioner or VRF A/C (air cooled)	< 5.4	16.0+ SEER	n/a	\$150
Air Conditioner (air cooled)	≥ 5.4 to ≤ 20	14.0 IEER	n/a	\$20/ton
VRF Air Conditioner (air cooled)	≥ 5.4 to ≤ 20	18.0 IEER	n/a	\$30/ton
Air Source Heat Pump or VRF	< 5.4	15.0 SEER	8.5 HSPF	\$100
Air Source Heat Pump or VRF	< 5.4	16.0+ SEER	8.5 HSPF	\$300
Air Source Heat Pump	≥ 5.4 to ≤ 20	12.5 IEER	3.2 @ 47°F	\$40/ton
VRF Air Source Heat Pump	≥ 5.4 to ≤ 20	18.0 IEER	3.2 @ 47°F	\$50/ton
Water Source Heat Pump or VRF	< 1.4	11.2 @ 86°F	3.9 @ 68°F	\$100/ton
Water Source Heat Pump or VRF	≥ 1.4 to ≤ 20	12.0 @ 86°F	3.9 @ 68°F	\$100/ton
Groundwater Source HP or VRF	Any	16.2 @ 59°F	3.5 @ 50°F	\$220/ton
Ground Source HP or VRF	Any	13.4 @ 77°F	2.8 @ 32°F	\$220/ton
Water-to-Water HP (water source)	≤ 20	10.6 @ 86°F	3.7 @ 68°F	\$100/ton
Water-to-Water HP (groundwater source)	Any	16.3 @ 59°F	3.1 @ 50°F	\$220/ton
Water-to-Water HP (ground source)	Any	12.1 @ 77°F	2.5 @ 32°F	\$220/ton

¹Water Source (typically boiler/cooling tower applications); Groundwater Source (typically open loop groundwater system); Ground Source (typically earth or pond coupled); VRF – Variable Refrigerant Flow.

²Table implies new matched indoor and outdoor components. If different, contact your electric utility.

^{3a}Unless noted otherwise, all cooling ratings are EERs, and all heating ratings are C.O.P.s. VRF ratings are for non-ducted equipment, however, actual installed configuration may be ducted, non-ducted, or mixed.

^{3b}Equipment efficiencies are full load ratings (except for VRF and IEER rated equipment) according to test procedures and conditions specified in ASHRAE Standard 90.1 – Energy Standard for Buildings Except Low-Rise Residential Buildings, and the following standards as applicable: AHRI/ISO 13256-1 – Water-to-Air and Brine-to-Air Heat Pumps, AHRI/ISO 13256-2 – Water-to-Water and Brine-to-Water Heat Pumps, and ANSI/AHRI Standard 1230 – Performance Rating of Variable Refrigerant Flow Multi-Split Air-Conditioning and Heat Pump Equipment.

There may be new equipment available on the market that does not meet the Minimum Cooling and/or Heating Efficiencies listed above. Check with your contractor prior to purchase. Send completed and signed application to your local electric utility office.

For program guidelines or application, please visit with your local public power utility or go to www.nppd.com and click on EnergyWiseSM Incentives.
